Product change

Please forward this information to your electrotechnical departments!

Dear Sir or Madam

You purchase from us sleeve or coupling housings with a mounted round screw support that are part of our "HEAVYCON" heavy plug connector series. Until now, the screw supports have been firmly fixed into the sleeve housings with adhesive. In the future, new hexagonal supports will be screwed. In order to meet the documented protection type, an O-ring must additionally be applied between support and housing. Of course, the thread size of the support will **not** change. You may still apply the changed housings in your applications without any problems. All other technical data remain the same. Please see the pictures below and get an impression.

Please see in the list enclosed the products that are subject to the change and are relevant for you. **The change is already being implemented and will be carried out successively.**

Do you have any questions? You are welcome to contact our support engineer or the sales team in Blomberg.

Yours faithfully

PHOENIX CONTACT Deutschland GmbH

i.A. Tobias Wernke
