Change of the solder pin guide of the PT 1.5 – SAA140690 product series
Please forward this information to your electrotechnical departments!

Dear Sir or Madam

In the course of our continuous improvement process, the lower side of the housing is optimized in the area of the solder pins as part of a revision of a tool. As a result, the tight fit of the solder pins is improved.

The product series includes 2 and 3-pos. PCB terminal blocks. An increased number of positions results from the assembly of these components. The change only refers to the 2-pos. version. As regards combined terminal blocks, the differences cannot be seen from the front.

The technical features and the dimensions will not be affected by this change.
