Change of the locking latch		
<p>The HEAVYCON housings listed in the product lists will be delivered with locking latches made of plastic (polyamide) in the future. These plastic latches have proven their worth for a couple of years now in our housing series HEAVYCON EVO and Standard. In comparison to plastic (PA)/stainless steel versions, they offer the advantage that they do not irreversibly deform plastically and the handling is significantly improved by the ergonomic design. Additionally, the new plastic latch can bear approximately the double lateral load in comparison with the old latch.</p> <p>Otherwise, nothing changes on the housing.</p> <p>The changed items are fully compatible to the current production status as well as the housing series HEAVYCON Standard and EVO.</p>
