Description of discontinuation
<p>We hereby discontinue the components for the 4-pos. QPD installation system for connecting cables up to 2.5 mm², which are listed in the product list.</p> <p>The system has been revised in the course of ongoing product updates. As a replacement for the previous versions, a new, also 4-pos. system is available. The new system has been significantly improved in terms of handling and functionality. In order to implement these improvements, changes had to be made to the product's geometry and design. As a consequence, the previous and the new systems are no longer compatible with one another in terms of assembly or mating.</p> <p>The new system is geared towards the QPD product ranges for 1.5 mm² and 6 mm² connection cross sections, which are also available, and thus represents a comprehensive range of products for connecting and branching of installation cables up to a rated current of 40 A.</p> <p>The affected products and available replacement products are listed in the accompanying product list.</p> <p>Further information and comparisons of the discontinued and new QPD systems can be found in the accompanying graphical comparison.</p>
