Subject: Powerfuse Product Date Code Format Change

Document #LFPCN_PG0106

Date: 02/28/2019

This letter is to inform Littelfuse Sales, Sales Support & Customers of a change that is being made to the date code format on the product and box labels for specific Powerfuse Mexico manufactured part numbers. The change is being made to align with other business units' format. Below are the old and new formats.

Changes details and examples

Date code change:

Current	New

Current format:

L = Littelfuse
9 = Last digit of the year
B = Month of year (A/Jan, B/Feb, C/Mar....)
21 = Day of the month
F = Fuse

New Format

02 = First 2 digits is month of the year
22 = Second 2 digits is date of the month
19 = Last 2 digits is the year

This change will be effective on May 27, 2019. All production on this day and thereafter will have the new date code printed on each label. Existing inventory will not be modified. Customers will begin to see the new formatted label upon depletion of the legacy inventory. No changes are required to ordering systems. This is strictly a printing change on the fuse and box labels. For the affected part numbers please see the parts list that accompanied this notification.

Thank you for your continued business.

Sincerely,
