Changeover from shield sleeves to Advanced Shielding Technology (AST)

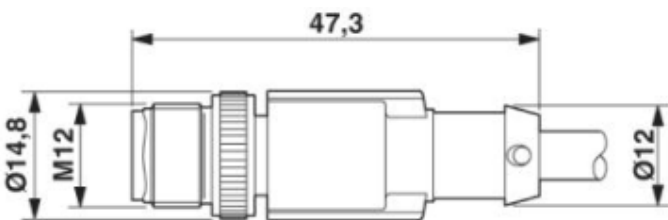

The shielding of the X-coded M12 heads will be changed from the previously used die-cast zinc shield sleeves to a molded metal shield (AST). This will ensure a higher-quality connection between the shielding braid of the cable and the M12 knurl.

Further information on Advanced Shielding Technology is available on our website <http://www.phoenixcontact.com>, by entering the web code **#2253** in the search field there.

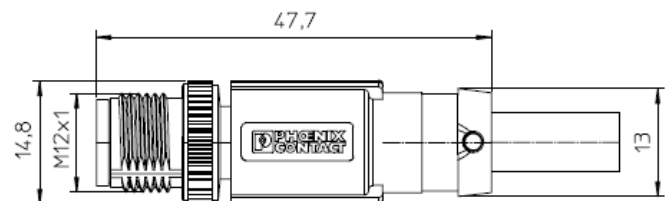

With the introduction of the new AST shielding technology, the knurls will be changed over from SPEEDCON fast locking system to standard M12 threads. SPEEDCON and standard M12 threads are plug-in compatible.

All other electrical and mechanical characteristics remain unchanged.
