Description of change

Product appearance (fit)
 Product geometry (form)
 Product function (function)

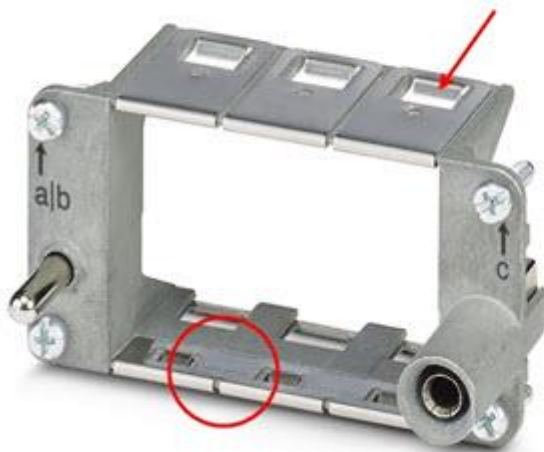

Changes to the retention springs on the module carrier frame

The stainless steel springs used to secure the modular HEAVYCON contact inserts will be modified. The springs will be designed as individual springs. Furthermore, the retention window for securing the contact insert modules will be reduced. This will ensure that the contact insert modules are more tightly secured in the module carrier frame.

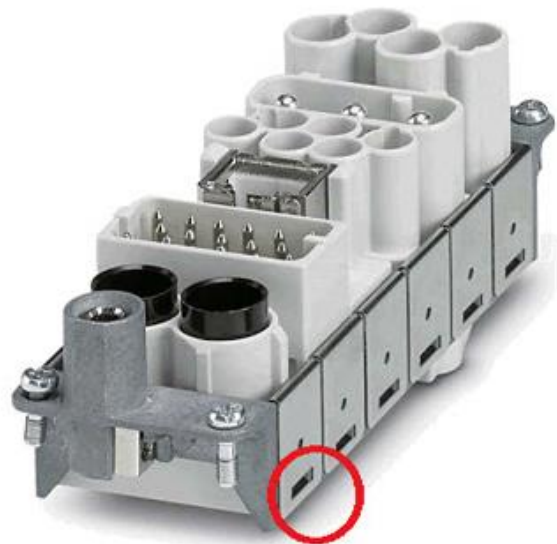

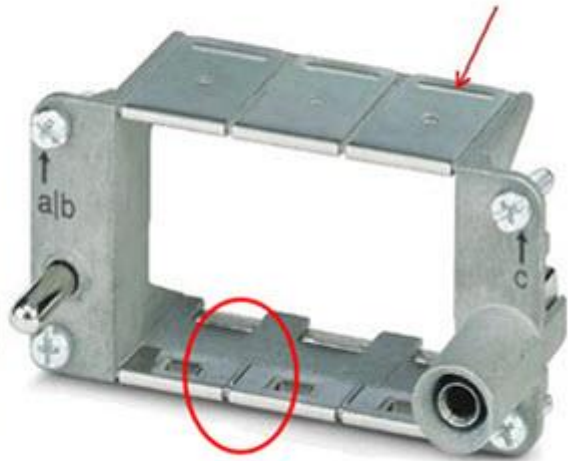

All other electrical and mechanical characteristics remain unchanged.
