Notice of Production Transfer of Lug-terminal Photo Flash Al. Electrolytic Capacitors

Dear Valuable Customers,

We would like to take this opportunity to extend our heartfelt appreciation for your continued support and patronage to Rubycon Corporation.

Rubycon has been producing primarily customized products according to our customers' specific requirements. However, the Photo Flash market overall has been decreasing year over year. Currently, we are facing low production volume due to this situation. As such, we find it necessary for us to consolidate the production plants. We have decided to transfer and integrate the production facilities of lug-terminal Photo Flash Capacitors to Akita Rubycon.

1. Items to be transferred

Lug terminal Photo Flash Capacitors;

a) FK series, b) FKX series, c) CDF series and d) SF series.

2. Schedule of transfer;

Current production in our HQ factory will be stopped by the end of December, 2019. After transferring equipment, new production in Akita Rubycon will begin from January 2020. The production equipment, process and materials are unchanged; only the location will change.

Because we transfer the current facilities to Akita after stopping production in HQ factory, sample requests for the produced made in Akita will be unavailable prior to the factory change. If you need to approve new production line or sample, please consider your demand for your approval time period and place order in advance. We request to receive your order by the end of July 2019.

We appreciate your kind attention and consideration of this change. Please contact your local Sale office with any questions or concerns.

Yours Sincerely,
Eloy Argudo Montes.
