Optimization of the HESI lever

As part of the ongoing product improvement process, the following change has been made to the above products:
 Optical changes and improvements in handling the lever. Please find details on the individual changes in the photos below. The function remains identical to the previous version.

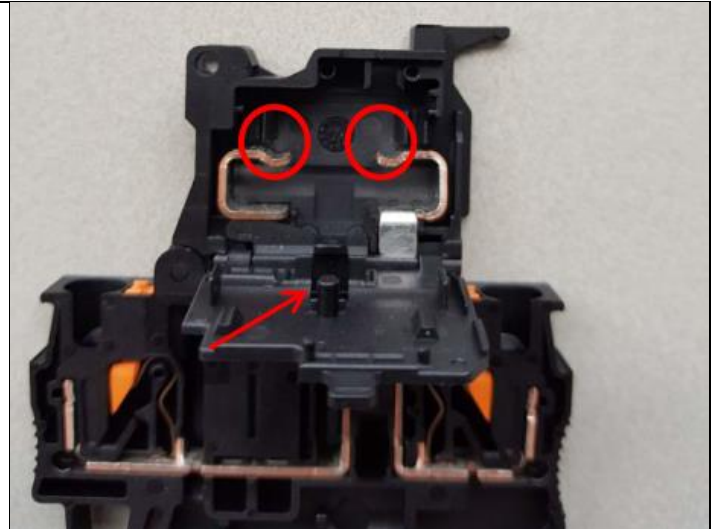

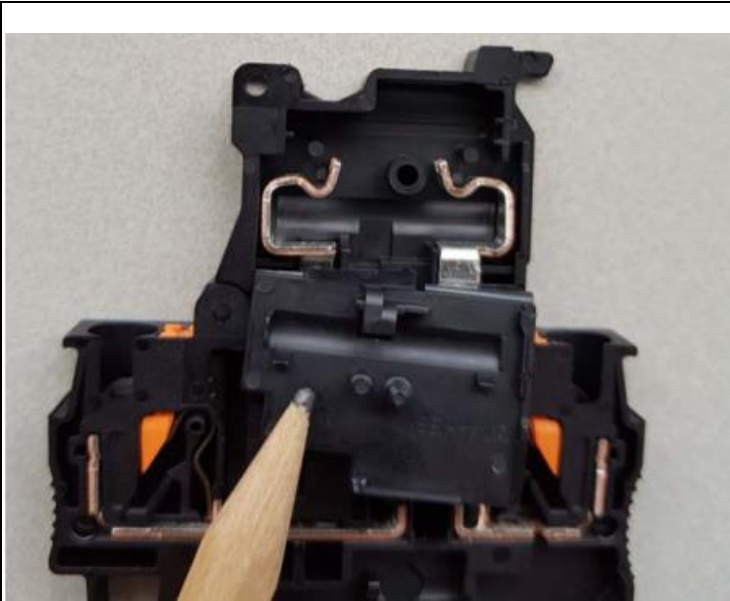

Previous production status	New production status
	
	<p>These changes (marked by arrows) only affect the lever. The labeling field was made smaller. Additional cutouts were added. The grip was optimized so that the lever can be opened more easily.</p>

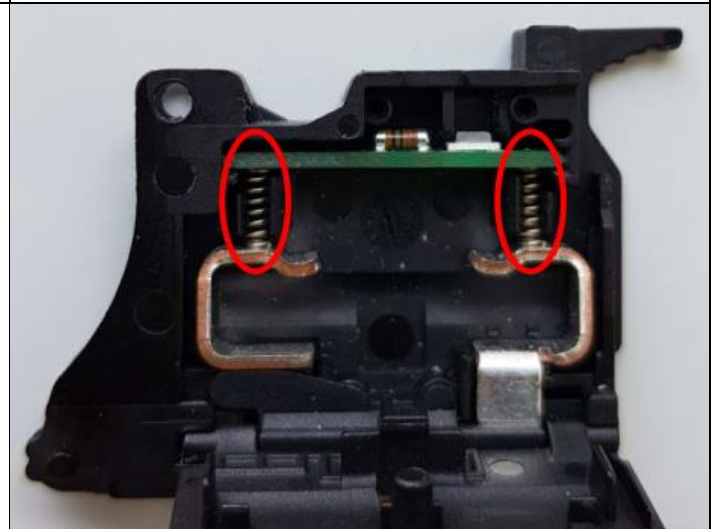

The grip was improved so that the lever can be opened more easily. A grip was also added so that the cover of the fuse chamber is easier to open. Furthermore, the window for the LED was made smaller.

The previous folding mechanism for opening the fuse chamber was replaced by hinges (circles). Above, the new grip can be seen.

The design of the metal latch was adapted, and the tab to hold the fuse changed.

The addition of springs means that the HESI LED levers provide better contact quality.

Expected initial delivery of the changed product(s)

As of early
March 2020
