Change of X-coded cable assemblies to Advanced shielding technology

Advanced Shielding Technology from Phoenix Contact is the innovative shielding concept for sensor/actuator cabling. The large-area, material-bonding 360° shield connection is unique on the market and optimizes the current design of M8 and M12 connectors.
With Advanced Shielding Technology, you are investing in reliable data, signal, and power transmission for the factory automation of the future.

The next slides shows you the change of the current design of X-coded cable assemblies and describe the advantages of the unique Advanced Shielding Technology.

Change of X-coded cable assemblies to Advanced shielding technology

Article description from Speedcon to Standard M12

In case of of the change from Speedcon to Standard M12 knurl,
the article description have to be changed.

Example:

NBC-MSX/ 1,0-94F SCO  NBC-M12MSX/ 1,0-94F

The new descriptions of each articles are included in the attached excel sheet

How it all started

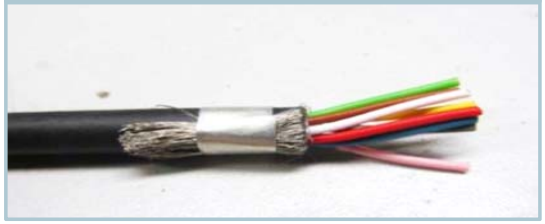
Current shielding concept

Cut cable

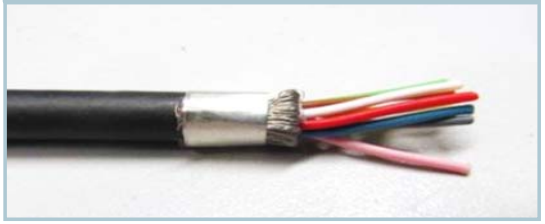
Brush shield

Push it over the cable jacket

Paste a foil on the cable



Cut the shield



Fit the shield sleeve on the cable

Prepare hand press

Crimp the lid

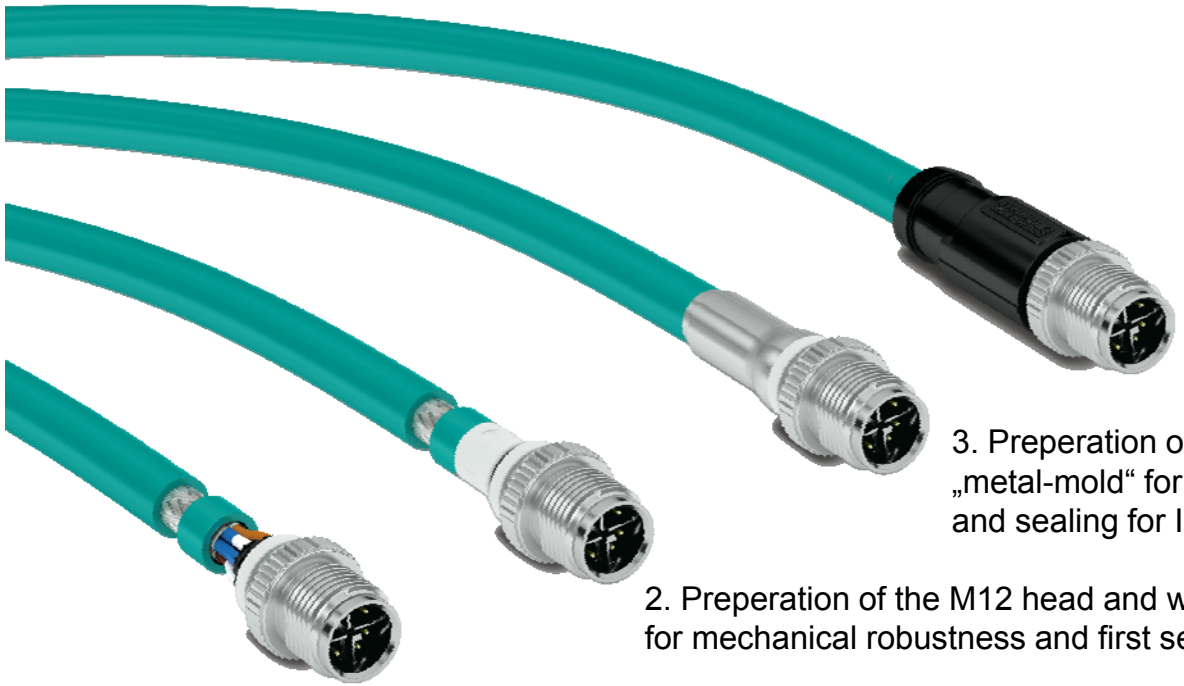
Presentation of the new shielding concept

Realization

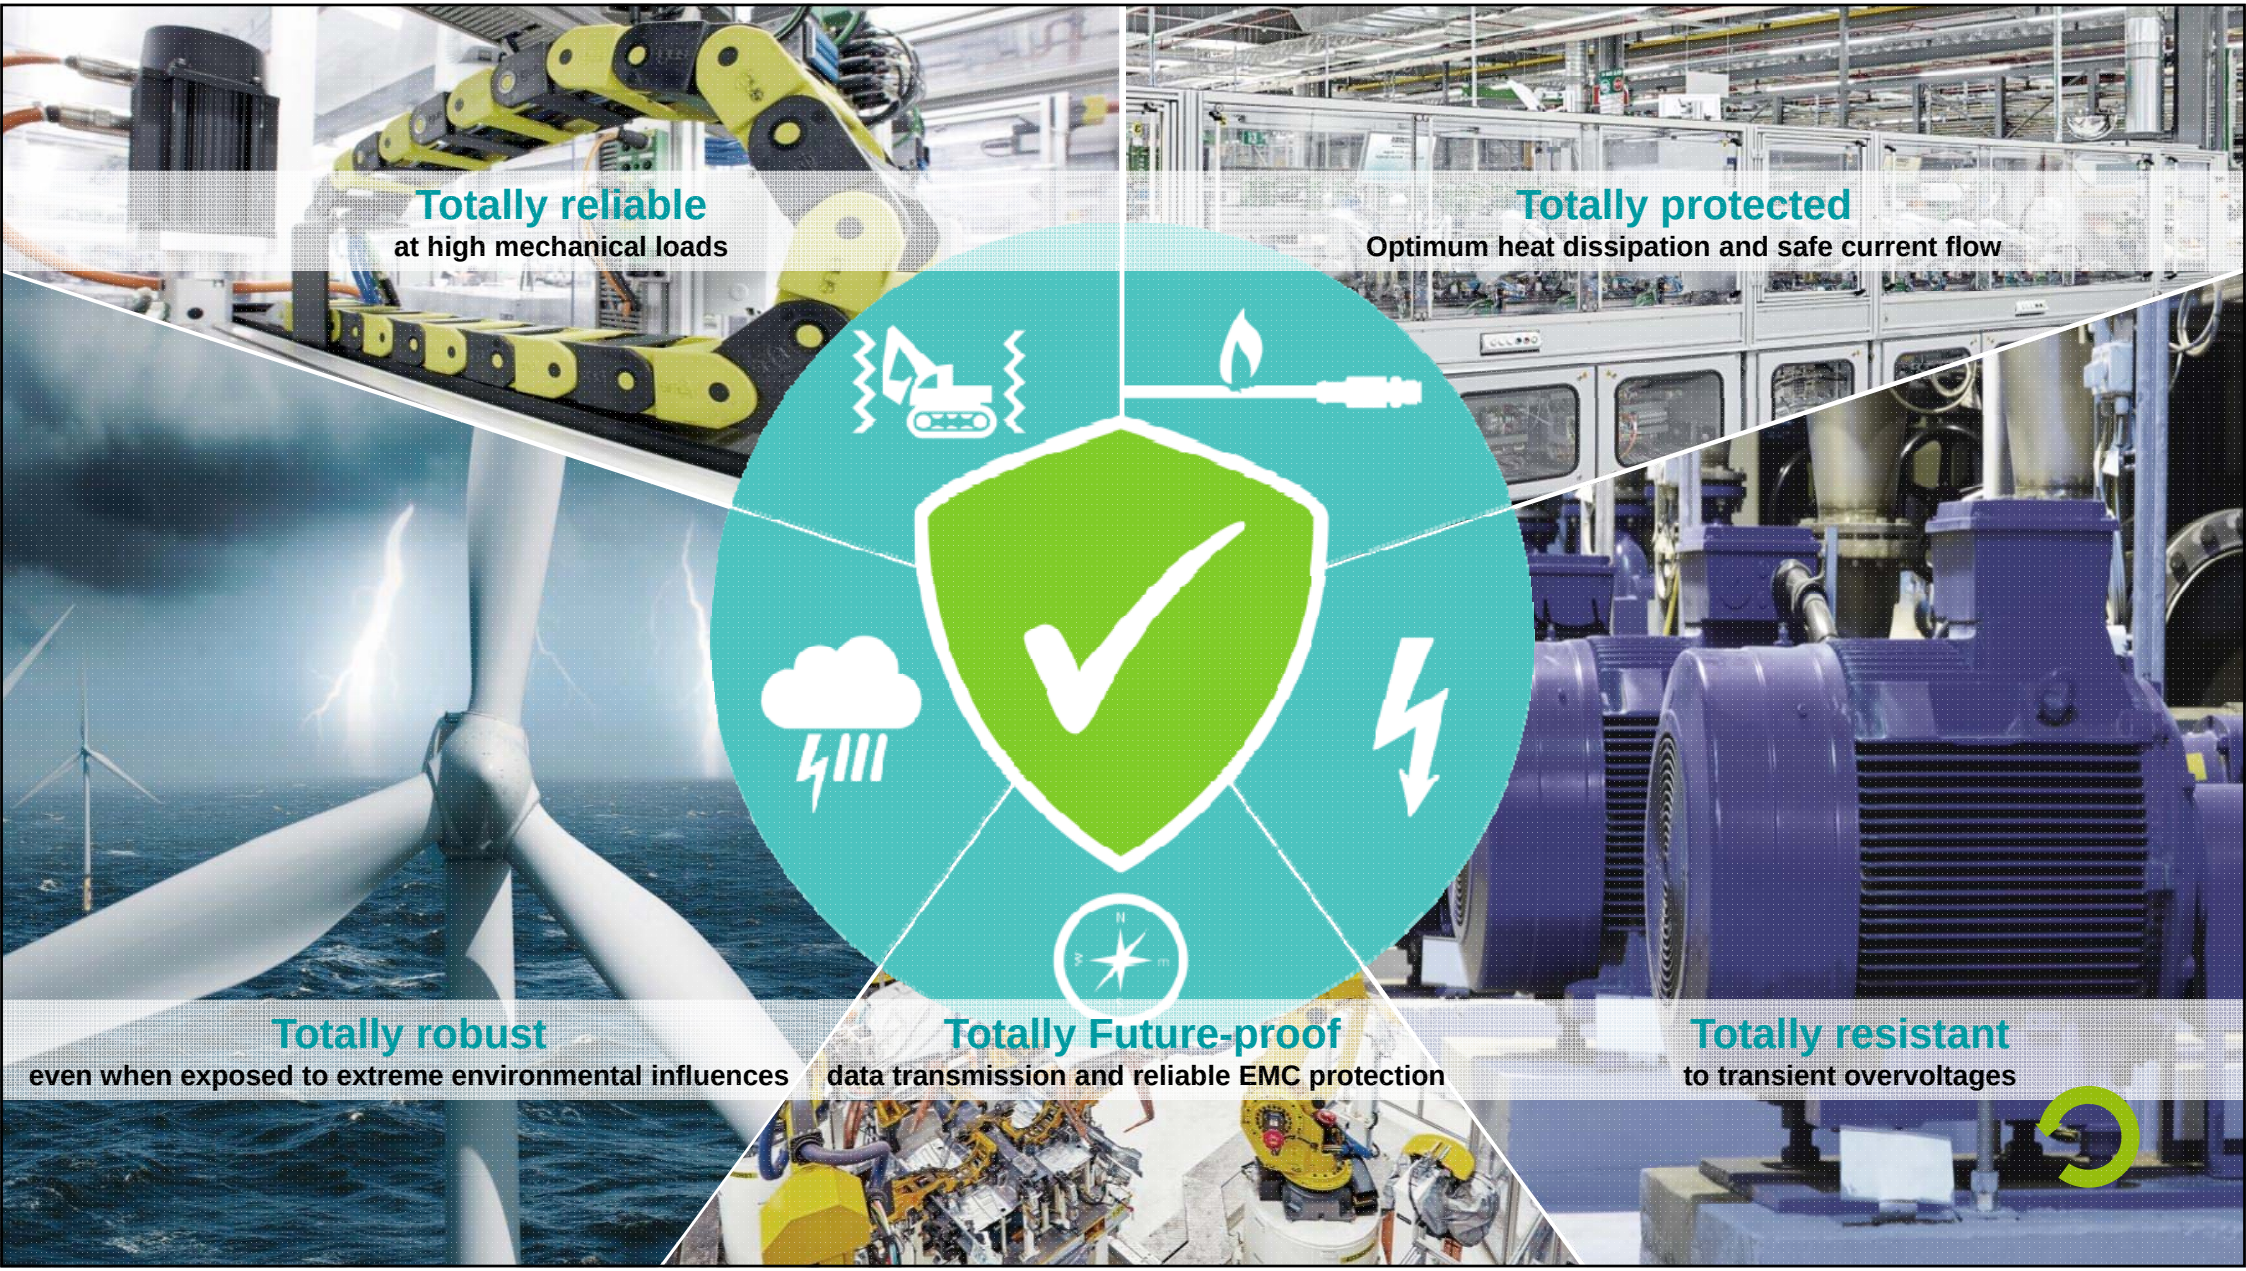


4. Preperation of the M12 handle body with standard overmolding

3. Preperation of the M12 head and cableshield with the special „metal-mold“ for 360° shielding connection, mechanical robustness and sealing for IP protection

2. Preperation of the M12 head and wires with the special „pre-mold“ for mechanical robustness and first sealing for IP protection

1. Assembling of the M12 head with standard crimp contacts

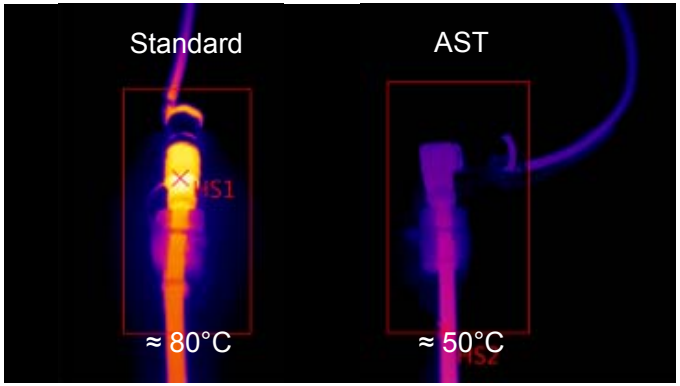


Totally reliable
at high mechanical loads
Totally protected
Optimum heat dissipation and safe current flow
Totally robust
even when exposed to extreme environmental influences
Totally Future-proof
data transmission and reliable EMC protection
Totally resistant
to transient overvoltages

Advanced Shielding Technology

Totally protected

If there is a short circuit in the machine parts, Advanced Shielding Technology can be used to enable a current to flow via the shield until the fuses are triggered. Thanks to the minimal generation of heat, the large-area shielding ensures greater safety and reduces the risk of fire.

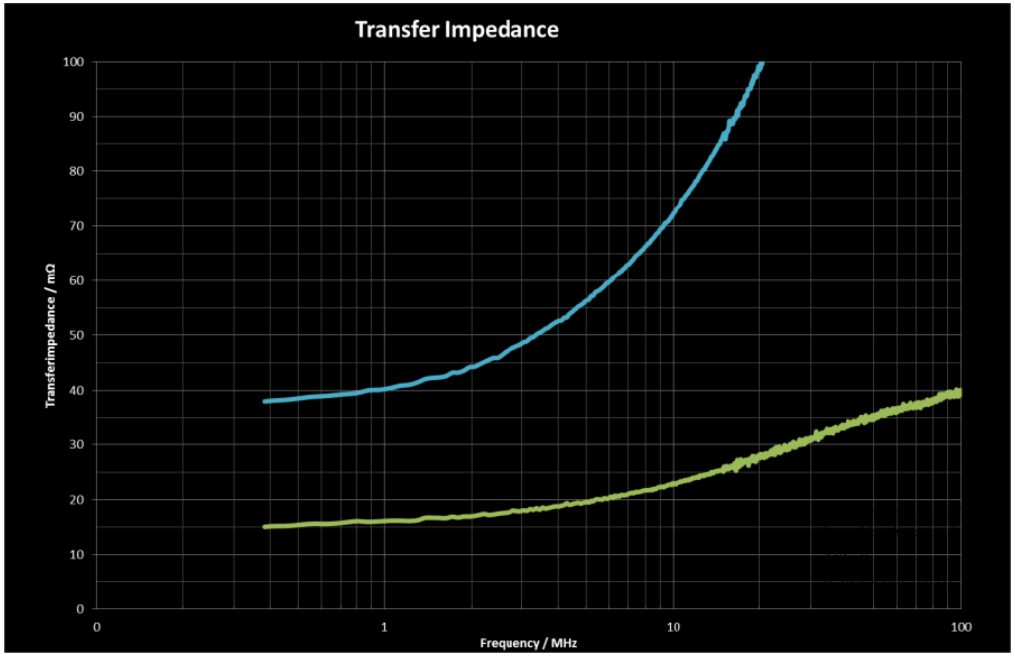


PHOENIX CONTACT
INSPIRING INNOVATIONS

Advanced Shielding Technology

Totally future-proof

In the field of intelligent production plants and industrial networks, Advanced Shielding Technology realizes the future-proof transmission of high data volumes and continuously increasing transmission rates of up to 40 Gbps. The improved shield dissipation thus provides secure protection against electromagnetic interferences.

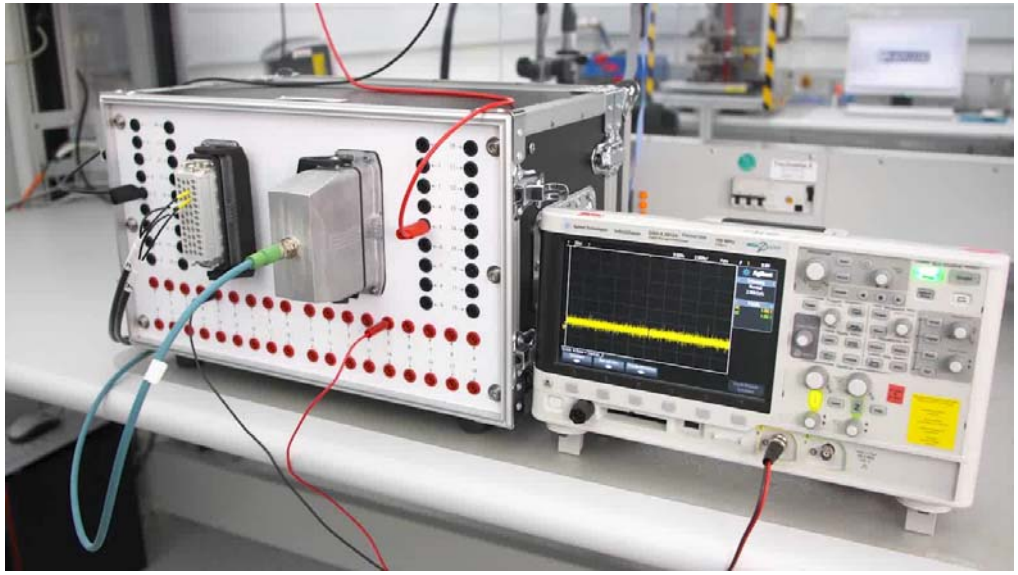


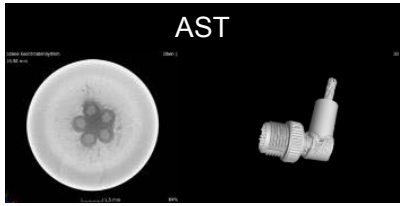
PHOENIX CONTACT
INSPIRING INNOVATIONS

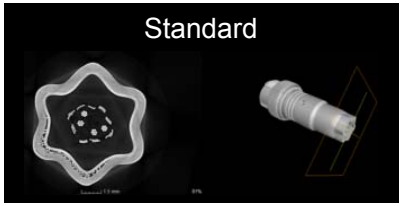
Advanced Shielding Technology

Totally reliable

Advanced Shielding Technology guarantees shock- and vibration-resistance at high mechanical loads in torsion, drag chain or robotic applications.







PHOENIX CONTACT
INSPIRING INNOVATIONS

Advanced Shielding Technology

Totally resistant

High voltages are briefly generated when switching inductive loads such as motors. Thanks to the continuous connection between the shielding braid and plug, assembled connectors with Advanced Shielding Technology are resistant to transient overvoltages and guarantee a higher level of system availability.

Advanced Shielding Technology

Totally robust

Thanks to the robust connection and 360° shield cover, connectors with Advanced Shielding Technology will easily even withstand lightning strikes and current peaks up to 20 kA. They are thus particularly suitable for use in outdoor applications.
