Change of A-coded cable assemblies to Advanced Shielding Technology

Advanced Shielding Technology from Phoenix Contact is the innovative shielding concept for sensor/actuator cabling. The large-area, material-bonding 360° shield connection is unique on the market and optimizes the current design of M8 and M12 connectors.

With Advanced Shielding Technology you are investing in reliable data, signal, and power transmission for the factory automation of the future.

The next slides show you the change of the current design of M12 A-coded cable assemblies and describe the advantages of the unique Advanced Shielding Technology.

CBF240031

Change of A-coded cable assemblies to Advanced shielding technology

Speedcon (if applicable) to standard M12 thread

Speedcon – Current design (if applicable)

Standard full thread – New design

CBF240031

Change of A-coded cable assemblies to Advanced shielding technology

Color of connector head & CE and WEEE mark

Green handle body – Current design (if applicable)

Black handle body – New design

Additional to the brand logo of Phoenix Contact (marked red), the grip body gets the CE mark and the WEEE logo on the other side to be compliant with the european regulations.

Change of A-coded cable assemblies to Advanced Shielding Technology

Article description from Speedcon to Standard M12

In case of the change from Speedcon to Standard full thread, the article description has to be changed.

Example:

SAC-8P-MS/1,1-PUR/MR SH SCO

SAC-8P-MS/1,1-PUR/MR SH

The new descriptions of each articles are included in the attached excel sheet.

- Notice: Not all articles are affected by a change in description

How it all started

Current shielding concept

Cut cable

Brush shield

Push it over the cable jacket

Paste a foil on the cable

Cut the shield

Fit the shield sleeve on the cable

Prepare hand press

Crimp the lid

Presentation of the new shielding concept

Realization

1. Assembling of the M12 head with standard crimp contacts

2. Preparation of the M12 head and wires with the special „pre-mold“ for mechanical robustness and first sealing for IP protection

3. Preparation of the M12 head and cableshead with the special „metal-mold“ for 360° shielding connection, mechanical robustness and sealing for IP protection

4. Preparation of the M12 handle body with standard overmolding

*Please note that the realization regarding the coding is the same even M12 x-coded is shown in the illustrations

Presentation of the new shielding concept

Realization

Cable Preparation

Pre-Mold

Metal-Mold

The ideal shield sleeve does not require a crimp

Totally reliable
at high mechanical loads

Totally protected
Optimum heat dissipation and safe current flow

Totally robust
even when exposed to extreme environmental influences

Totally Future-proof
data transmission and reliable EMC protection

Totally resistant
to transient overvoltages

Totally protected

If there is a short circuit in the machine parts, Advanced Shielding Technology can be used to enable a current to flow via the shield until the fuses are triggered. Thanks to the minimal generation of heat, the large-area shielding ensures greater safety and reduces the risk of fire.

Totally future-proof

In the field of intelligent production plants and industrial networks, Advanced Shielding Technology realizes the future-proof transmission of high data volumes and continuously increasing transmission rates of up to 40 Gbps. The improved shield dissipation thus provides secure protection against electromagnetic interferences.

Advanced Shielding Technology

Totally reliable

Advanced Shielding Technology guarantees shock- and vibration-resistance at high mechanical loads in torsion, drag chain or robotic applications.

Advanced Shielding Technology

Totally resistant

High voltages are briefly generated when switching inductive loads such as motors. Thanks to the continuous connection between the shielding braid and plug, assembled connectors with Advanced Shielding Technology are resistant to transient overvoltages and guarantee a higher level of system availability.

Advanced Shielding Technology

Totally robust

Thanks to the robust connection and 360° shield cover, connectors with Advanced Shielding Technology will easily even withstand lightning strikes and current peaks up to 20 kA. They are thus particularly suitable for use in outdoor applications.
