

Title of Document:	REPORT	Issue No. G26-02507	Rev. 1
Customer:	Issue date: April 24, 2026		
Title subject:	Discontinuation of Through-Hole Type Connectors Due to the Discontinuation of the Water-Repellent Agent	Revision date: May 18, 2026	

We would like to inform you of the discontinuation of the subject products manufactured by our company.

1. Target Products

Through-hole type connectors in the CS, CSW, FE, FMK, FMZ, JE, JED, MJ, and SZ series
(See attached list)

2. Schedule

Scheduled for the end of 2027.

3. Details

A water-repellent agent is used in some of our PCB connector products to prevent flux contamination inside the connector during soldering.

As the water-repellent agent currently in use is being discontinued, alternative agents were evaluated. However, it was confirmed that none of the alternatives provide sufficient water-repellent performance for through-hole type connectors.

Although alternative materials with water-repellent performance equivalent to the current material are desired, water-repellent agent manufacturers currently have no plans to develop such materials.

Therefore, the subject products shall be discontinued after the current inventory of the water-repellent agent held by our company has been consumed.

4. Alternative Products

As a general rule, no PCB-compatible alternative products are available. Customers are requested to consider replacing the subject products with other products in the same series manufactured by our company, such as SMT-type products.

Your thought understanding and consideration would be very much appreciated.

-End-
