Change of the MSTB(A)L 2,5/...-G(F)... header
Please forward this information to your electrotechnical departments!

Dear Sir or Madam

In order to be able to manufacture the header optimally, the solder pins will be slightly changed. The tips of the radius tread R 0.3 will be rotated by 90°. This means that, until now, the radius has been visible in the front view. Now, it can be found at the side. The technical features are not affected by this change.

The new version is expected to be delivered as of November 29, 2013.

Do you have any questions? You are welcome to contact our support engineer or the sales team in Blomberg.

Yours faithfully

PHOENIX CONTACT Deutschland GmbH
