Change of the outer contour and surface structure – A02-12020
Please forward this information to your electrotechnical departments!

Dear Sir or Madam

Different optimizations were implemented at the outer contour of the panel mounting frame as part of product improvements. In the area of the screw holes, the contour was adjusted to improve the sealing. As a result, the contour of the sealing changed as well. Furthermore, the contours of the PCB installation edge were adjusted. In addition, the surface structure changes due to a change of the supplier. The surface is no longer matt, but shiny. The electrical and other technical features are not affected by this change.
