### Change to the current bar, the pusher, and the housing

Within the scope of continuous product improvements, various changes have been made to the terminal blocks of the PT 4-MT, PT 4-TG, PT 4-FSI, and PT 4-HESI series. The current bars, pushers, and housings of the terminal blocks have been changed. The changes are only visible when looking at the uncovered side of the terminal block. The housing contour remains unchanged. The changes are also not visible when looking at the terminal blocks from above. Furthermore, the technical data, operation, and approvals of the terminal blocks remain unchanged. It is also possible to combine old and new terminal blocks and to use the available accessories.

The figure below shows the changes using the PT 4-MT terminal block as an example.

Expected initial delivery of the changed product(s)	From the beginning of January 2019
