Subject: Change of Carrier Tape for Nano OMNI Block - 154 Series Fuse/Fuse Holder

Thank you for using Littelfuse products.

This is to inform you that we will be implementing a change in the carrier tape that we are using for packaging and shipping our nano OMNI Block 154 Series Fuse/Fuse Holder assembly parts. We will be changing it from a "Black" colored carrier tape to a "Clear" type carrier tape. The reason for the change is to improve on the inspection of the fuses without manually flipping the parts inside the black carrier tape cavity.

This change will only be on the packaging and has no effect on the electrical characteristics of the parts, maintaining the same form, fit and function.

Please see the attached supplement file for list of the part numbers which will use this new carrier tape.

### **Timeframe**

The effective date of this change is 25th, April 2012.

Should you have queries relative to this change, please contact your local Littelfuse Sales Office or Product Management Team to help you.

Best regards,

Daniel Wang
